

MEDICATION GUIDE Pantoprazole Sodium Delayed-Release Tablets (pan toe' pra zole soe' dee um)
What is the most important information I should know about pantoprazole sodium delayed-release tablets? You should take pantoprazole sodium delayed-release tablets exactly as prescribed, at the lowest dose possible and for the shortest time needed. Pantoprazole sodium delayed-release tablets may help your acid-related symptoms, but you could still have serious stomach problems. Talk with your doctor. Pantoprazole sodium delayed-release tablets can cause serious side effects, including: • A type of kidney problem (acute tubulointerstitial nephritis). Some people who take proton pump inhibitor (PPI) medicines, including pantoprazole sodium delayed-release tablets, may develop a kidney problem called acute tubulointerstitial nephritis that can happen at any time during treatment with pantoprazole sodium delayed-release tablets. Call your doctor right away if you have a decrease in the amount that you urinate or if you have blood in your urine. • Diarrhea caused by an infection (<i>Clostridium difficile</i>) in your intestines. Call your doctor rightaway if you have watery stools or stomach pain that does not go away. You may or may not have a fever. • Bone fractures (hip, wrist, or spine). Bone fractures in the hip, wrist, or spine may happen in people who take multiple daily doses of PPI medicines and for a long period of time (a year or longer). Tell your doctor if you have a bone fracture, especially in the hip, wrist, or spine. • Certain types of lupus erythematosus. Lupus erythematosus is an autoimmune disorder (the body's immune cells attack other cells or organs in the body). Some people who take PPI medicines, including pantoprazole sodium delayed-release tablets, may develop certain types of lupus erythematosus or have worsening of the lupus they already have. Call your doctor right away if you have new or worsening joint pain or a rash on your cheeks or arms that gets worse in the sun. • Low magnesium and other mineral levels in your body can happen in people who have taken pantoprazole sodium delayed-release tablets for at least 3 months. Tell your doctor if you have symptoms of low magnesium levels, including seizures, dizziness, irregular heartbeat, jitteriness, muscle aches or weakness, and spasms of hands, feet or voice. Talk to your doctor about your risk of these serious side effects. Pantoprazole sodium delayed-release tablets can have other serious side effects. See “What are the possible side effects of pantoprazole sodium delayed-release tablets?” What are pantoprazole sodium delayed-release tablets? A prescription medicine called a proton pump inhibitor (PPI) used to reduce the amount of acid in your stomach. In adults, pantoprazole sodium delayed-release tablets are used for: • up to 8 weeks for the healing and symptom relief of acid-related damage to the lining of the esophagus (called erosive esophagitis or EE). Your doctor may prescribe another 8 weeks of pantoprazole sodium delayed-release tablets in patients whose EE does not heal. • maintaining healing of EE and to help prevent the return of heartburn symptoms caused by GERD. It is not known if pantoprazole sodium delayed-release tablets are safe and effective when used for longer than 12 months for this purpose. • the long-term treatment of conditions where your stomach makes too much acid. This includes a rare condition called Zollinger-Ellison Syndrome. In children 5 years of age and older, pantoprazole sodium delayed-release tablets are used for: • up to 8 weeks for the healing and symptom relief of EE. It is not known if pantoprazole sodium delayed-release tablets are safe if used longer than 8 weeks in children.

Pantoprazole sodium delayed-release tablets are not for use in children under 5 years of age. It is not known if pantoprazole sodium delayed-release tablets are safe and effective in children for treatment other than EE.
Do not take pantoprazole sodium delayed-release tablets if you are: - allergic to pantoprazole sodium, any other PPI medicine, or any of the ingredients in pantoprazole sodium delayed-release tablets.
